MISSOURI WEEKLY HAY SUMMARY 9/03/2026

Extreme heat and lack of moisture is resulting in conditions across the state to quickly decline. Areas in the southwest quarter of the state are seeing some ponds, creeks, and springs going dry. Pastures have turned brown and some hay feeding is occurring. Areas to the north have been more fortunate with moisture for most of the year until recently. Conditions of pastures and water supplies are in much better shape but prolonged heat with nighttime lows staying in the 70's will quickly cause conditions in those areas to decline as well. Corn harvest has started in several areas of the state for those that got planted early, and in areas that received moisture there is still some hay being baled. The supply of hay is moderate to heavy and hay listed for sale is abundant, especially fair to good quality grass types of hay. Hay demand and movement have been light. Hay prices are steady. The Missouri Department of Agriculture has a hay directory at <https://apps.mda.mo.gov/haydirectory> or visit the University of Missouri Extension feed stuff finder at <https://feedstufffinder.org>
