Missouri Department of Agriculture
Mission Statement

To serve, promote, and protect the agricultural producers, processors, and consumers of Missouri’s food, fuel, and fiber products.
Bureau of Feed and Seed
2020 Program Review

The Missouri Department of Agriculture (MDA) Plant Industries Division, Bureau of Feed and Seed (Bureau) assists the state’s feed industry and consumers through inspecting and testing product and providing information to consumers to assist in making buying decisions. The Summary Report of 2020 Commercial Feed Inspections includes data from over 1,200 inspections and over 33,270 laboratory tests. This report is provided as an annual review of the bureau’s responsibilities and accomplishments and as reference material.

COVID 19 made 2020 a challenging year for the Bureau and the regulated industry. The Bureau extends it thanks to the many firms in our state that worked with the Bureau to continue to assure a safe and secure feed supply through the difficult circumstances we experienced this past year.

Despite the challenges of COVID 19, in 2020 the feed program took major steps to increase its regulatory capacity and pivot the program to more of a focus on food safety. On June 8, 2020, with the assistance of an FDA grant, the Missouri Department of Agriculture’s Bureau Feed and Seed became the 8th state to be found by FDA audit staff fully compliant with all eleven Animal Food Regulatory Program Standards (AFRPS). This grant also made it possible for the Missouri Department of Agriculture Feed Control Laboratory to become ISO IEC 17025 accredited. This establishes a quality management system for the laboratory. Full implementation of the AFRPS standards was the culmination of 5 years of work and made possible by a $3,000,000 FDA grant. We believe these successes represent significant contributions to the Missouri Department of Agriculture’s achievement of its mission: “To serve, promote, and protect our agricultural producers, processors and consumers of Missouri’s food, fuel and fiber products”.

The Bureau was successful in receiving approval of its application for two FDA Cooperative Agreement grants. One of the grants is to maintain its Animal Food Regulatory Program Standards. This 5 year, $1,500,000 grant will be utilized by the Bureau to maintain the AFRPS over the next 5 years. In addition, the Bureau received a 5 year, $1,500,000 grant to build capacity to inspect animal food facilities for compliance with the Current Good Manufacturing Practices (CGMP) and the Preventive Control (PC) Rule for Animal Food under state authority. The Bureau has seven staff trained to conduct inspections under 21 CFR Part 507 as part of the Food Safety Modernization Act. MDA staff performed GMP/PC inspections in 2020.

Staff inspected Missouri feed facilities to review the practices of manufacturers and/or distributors of feed products containing prohibited mammalian protein in compliance with Federal Rule 21 CFR Part 589. These inspections are
designed to make sure no prohibited protein is fed to ruminant animals. In 2020, the Bureau performed 24 BSE inspections.

Eleven GMP inspections of federally licensed medicated feed manufacturing establishments were performed by MDA staff in 2020. These inspections also included coverage under the 507 CGMP and PC rules. An additional 50 medicated feed inspections were conducted at medicated feed production plants not licensed by FDA. Of the 63 inspections made at these plants, 27 of the firms were also inspected for compliance with the 507 cGMP rules for animal food. These inspections are a vital part of the food safety initiative for all animal feed. The program is intended to ensure legally approved levels and combinations of drugs and antibiotics are used in feed products and that each facility’s housekeeping, records, labeling, cleanliness and other practices are in compliance with 21 CFR Part 225.

Food safety is also addressed in the bureau’s annual survey of corn produced in the state. In addition to providing test information to manufacturers for crude protein levels, the bureau tests for aflatoxin, fumonisin, vomitoxin and zearalenone. If corn is found containing toxin levels exceeding FDA guidelines for safe use for livestock, notifications are sent immediately to the facility at which the corn was sampled. Toxin levels in corn were generally low in Missouri corn in 2020.

The Bureau of Feed and Seed inspectors responded swiftly to ten complaints in 2020 about the quality or safety of feed or feed ingredients. When problems required testing beyond the scope of the feed program or the capabilities of the Missouri Feed Control Laboratory, other agencies were utilized or samples were sent to other laboratories for testing.

The Bureau of Feed and Seed cooperates with the Plant Pest Program and the USDA to obtain samples from Missouri’s wheat production on a biannual basis. The assurance provided by this testing allows Missouri wheat to be exported to many countries that require the testing. No samples were collected for karnal bunt wheat disease in 2020.

The Bureau of Feed and Seed took regulatory action against unlicensed companies or those who failed to file tonnage reports. Those actions are reported in “Violations Other Than Failure to Meet Label Claims.”

In 2020, inspectors collected 4,082 samples of finished feeds and feed ingredients. The collected samples were tested for adherence to label guarantees, resulting in 33,271 individual assays in 2020. If testing revealed a deficiency or excess from the guaranteed analysis or something of a detrimental nature, a Withdrawal from Distribution Order was issued immediately. There were 536 withdrawals issued in 2020, for a statewide compliance rate of 87.09%. A total of 311 service and complaint samples were analyzed in 2020.
The Missouri Feed Control Laboratory analyzed six customer-formula samples in 2020. Customer-formula feeds are those for which the customer has designed his own ration and asks for specific ingredients in specific quantities to be blended by the manufacturer. Each customer requesting the feed, as well as the manufacturer of the feed, received an analytical report showing nutrient levels found in the sample. In addition, customers received a questionnaire to confirm they received the quality of feed requested.

The Excellence in Compliance Award Program recognizes feed companies who have achieved at least 90% adherence to label guarantees on five or more samples tested by the laboratory. The companies must also be up-to-date with all fees and reporting. Eighty-three companies qualified for the award in 2020. Fifty of those are located in Missouri.

U.S. Food and Drug Administration
Guidelines for Aflatoxin Levels

Corn containing less than 20 parts per billion aflatoxin is considered safe by the U.S. Food and Drug Administration for use in all animal feed. Corn exceeding 20 ppb can be fed only for specific age, weight, and production stage. Corn exceeding 300 ppb must be blended with corn containing little or no aflatoxin before feeding is allowed to specific age, weight, and production stage of livestock. Before corn can be blended for out-of-state shipment, the U.S. Food and Drug Administration must be notified and permission obtained from the Missouri Department of Agriculture for this to be allowed.

U.S. Food and Drug Administration guidelines are as follows:

<table>
<thead>
<tr>
<th>Aflatoxin Level (in parts per billion)</th>
<th>Class of Animal</th>
<th>Commodities</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 ppb</td>
<td>Dairy animals, animals not listed below, or unknown use</td>
<td>For corn, peanut products, cottonseed meal and other animal feeds and feed ingredients</td>
</tr>
<tr>
<td>20 ppb</td>
<td>Immature animals</td>
<td>For corn, peanut products and other animal feeds and feed ingredients, but excluding cottonseed meal</td>
</tr>
<tr>
<td>20 ppb</td>

U.S. Food and Drug Administration
Guidelines for Fumonisin Levels

Corn and corn by-products containing less than 5 parts per million fumonisin is considered safe by the U.S. Food and Drug Administration for use in all animal feed. Corn and corn by-products exceeding 5 ppm can be fed only for specific species, age, and production stage. The recommended maximum levels for fumonisin in animal feeds that FDA considers achievable with the use of good agricultural and good manufacturing practices are presented below. FDA believes that controlling fumonisin to these recommended levels can reduce exposure to fumonisin that may be found in corn products intended for animal consumption.

<table>
<thead>

2020 Corn Survey

The Missouri Department of Agriculture is happy again to report the results on our annual monitoring of aflatoxin in corn. This survey has been reported yearly since 1993. We also analyze all customer complaint samples for aflatoxin when symptoms suggest adulteration. Laboratory tests are conducted to determine the average crude protein in corn. In 2020, the average crude protein for corn was 7.59%, higher than 7.45% in 2019’s corn crop. Each sample was adjusted to a 13.5% moisture level.

Samples of corn are drawn from counties having an expected production of greater than 1.5 million bushels, with one sample added for each additional two million bushels produced. 154 samples were tested for aflatoxin. Only seven positive results were found. Two samples tested to be in the 10-20 ppb range, three in the 20-49 ppb range and two in the 100-199 ppb range. Eighty-one samples were tested for fumonisin. Twenty-two positives were found; nine in the 5-10.0 ppm, eleven in the 10.1-20 ppm range, and one in the 21.1-30 ppm range.

The Missouri Department of Agriculture is committed to food safety and quality for the protection of our state’s consumers. Our mission is to continue to serve, promote, and protect the agriculture producers, processors and consumers of Missouri food, fuel and fiber products.

Excellence in Compliance Award

The Excellence in Compliance Award is designed to recognize those companies who have high standards and have met or exceeded a 90% rounded average compliance in 2020. Those companies are listed below.

The Missouri Department of Agriculture will issue a certificate to honor those companies that have met or exceeded the following criteria:

• At least five random official regulatory samples must have been taken by a Missouri Feed and Seed inspector and been analyzed by the State Feed Control Laboratory in 2020.

• A 90% passing compliance rate on five or more samples must have been achieved for the 2020 calendar year.

• The company labeling the feed or feed ingredient must be in good standing with the Bureau of Feed and Seed, retain a Missouri Commercial Feed License, and have all quarterly inspection fees or yearly product listing (pet and specialty pet foods) paid as required.

A total of 83 feed labelers have achieved a 90% or better compliance rate in Missouri in 2020.

Fifty of these companies maintain an address in the state of Missouri and 33 are located outside of Missouri. A number of companies with out-of-state addresses have manufacturing facilities in Missouri.

</table>
SECTION ONE

Section One is intended to show the reliability of labelers in meeting their claims for feed quality. Inspections were planned on a random basis. The greater the number of samples taken per labeler, the greater the probability that the consistency in meeting claims shown will represent how well the labeler met guarantees.

SECTION TWO

Section 2 lists regulatory actions taken on violations other than failure to meet the guarantees. Violations of the law other than not meeting guarantees include: failure to obtain a Missouri Commercial Feed License, failure to pay inspection fees, negligence in revising the labeling, and failure to label the feed as required by law and as requested by the Missouri Department of Agriculture.
