FEED AND SEED PROGRAM

Missouri Department of Agriculture Mission Statement

To serve, promote, and protect the agricultural producers, processors, and consumers of Missouri's food, fuel, and fiber products.

The Missouri Department of Agriculture (MDA) Plant Industries Division, Feed and Seed Program (Program) assists the state’s feed industry and consumers through inspection and product testing. The Summary Report of 2024 Commercial Feed Inspections includes data from 1,155 inspections and 28,989 laboratory tests. This report provides an annual review of the program’s responsibilities and accomplishments.

In 2020, the program was recognized by FDA for reaching full implementation of the Animal Food Regulatory Program Standards (AFRPS) which was the culmination of five years of work made possible by a \$3,000,000 FDA grant. In addition, the grant made it possible for the Missouri Department of Agriculture Feed Control Laboratory to become ISO/IEC 17025 accredited through the implementation of a quality management system. We believe these successes represent significant contributions to the Missouri Department of Agriculture’s achievement of its mission: “To serve, promote, and protect our agricultural producers, processors and consumers of Missouri’s food, fuel and fiber products.”

The Program was awarded two FDA Cooperative Agreement grants in 2020. One of the grants is a five year, \$1,500,000 grant to maintain compliance with the Animal Food Regulatory Program Standards. The other grant is a five year, \$1,500,000 grant to build capacity to inspect animal food facilities for compliance with the Current Good Manufacturing Practices (CGMP) and the Preventive Control (PC) Rule for Animal Food. The grant funds will increase the program’s regulatory capacity and pivot the program to more of a focus on food safety.

The Program continues to serve Missouri agriculture by conducting contract inspections under FDA authority. In 2023, a greater number of comprehensive inspections were elected to maximize effectiveness in safeguarding Missouri feed facilities. In 2024, the program has continued this work.

October 2023 to September 2024

Number of Inspections	FDA Inspection Type

3	Verification Audits

Food safety is addressed in the program's annual survey of corn produced in the state. In addition to providing test information to manufacturers for crude protein levels, the program tests for aflatoxin and fumonisin. If corn is found containing toxin levels exceeding FDA guidelines for safe use for livestock, notifications are sent to the facility at which the corn was sampled.

The program inspectors responded swiftly to 30 complaints in 2024 about the quality or safety of feed or seed. When problems required testing beyond the scope of the program or the capabilities of the Feed Control Laboratory, other agencies were utilized or samples were sent to other laboratories for testing.

The Feed and Seed Program took regulatory action against unlicensed companies or those who failed to file tonnage reports. Those actions are reported in "Violations Other Than Failure to Meet Label Claims."

In 2024, inspectors collected 2,976 samples of finished feeds and feed ingredients. The collected samples were tested for adherence to label guarantees, resulting in 28,989 individual assays. If testing revealed a deficiency or excess from the guaranteed analysis or something of a detrimental nature, a Withdrawal from Distribution Order was issued immediately. There were 454 withdrawals issued, for a statewide compliance rate of 87.16%. In addition, a total of 194 service and complaint samples were analyzed.

The Feed Control Laboratory analyzed twenty-four customer-formula samples in 2024. Customer-formula feeds are those for which the customer has designed his own ration and asks for specific ingredients in specific quantities to be blended by the manufacturer. Each customer requesting the feed, as well as the manufacturer of the feed, received an analytical report showing nutrient levels found in the sample.

The Excellence in Compliance Award recognizes feed companies who have achieved at least 89.5% adherence to label guarantees on five or more samples tested by the laboratory. In order to receive the award, the companies must be up-to-date with all fees and reporting. Seventy-six companies qualified for the award in 2024. Thirty-four of those are located in Missouri.

U.S. Food and Drug Administration Guidelines for Aflatoxin Levels

Corn containing less than 20 parts per billion aflatoxin is considered safe by the U.S. Food and Drug Administration for use in all animal feed. Corn exceeding 20 ppb can be fed only for specific age, weight, and production stage. Corn exceeding 300 ppb must be blended with corn containing little or no aflatoxin before feeding is allowed to specific age, weight, and production stage of livestock. Before corn can be blended for out-of-state shipment, the U.S. Food and Drug Administration must be notified and permission obtained from the Missouri Department of Agriculture for this to be allowed.

U.S. Food and Drug Administration guidelines are as follows:

Aflatoxin Level (in parts per billion)	Class of Animal	Commodities
20 ppb	Dairy animals, animals not listed below, or unknown use	For corn, peanut products, cottonseed meal and other animal feeds and feed ingredients
20 ppb	Immature animals	For corn, peanut products and other animal feeds and feed ingredients, but excluding cottonseed meal
20 ppb	Pets (dogs, cats, rabbits, etc.) of all ages	For corn, peanut products, cottonseed meal, and other food ingredients and complete pet food
100 ppb	Breeding cattle, breeding swine, and mature poultry (e.g. laying hens)	For corn and peanut products
200 ppb	Finishing swine (100 pounds or more)	For corn and peanut products
300 ppb	Beef cattle, swine, poultry (Regardless of age or breeding status).	For cottonseed meal
300 ppb	Finishing beef cattle (e.g. feedlot cattle)	For corn and peanut products

U.S. Food and Drug Administration Guidelines for Fumonisin Levels

Corn and corn by-products containing less than 5 parts per million fumonisin is considered safe by the U.S. Food and Drug Administration for use in all animal feed. Corn and corn by-products exceeding 5 ppm can be fed only for specific species, age, and production stage. The recommended maximum levels for fumonisin in animal feeds that FDA considers achievable with the use of good agricultural and good manufacturing practices are presented below. FDA believes that controlling fumonisin to these recommended levels can reduce exposure to fumonisin that may be found in corn products intended for animal consumption.

Class of Animal	Commodities & Portion of Diet	Levels in Corn & Corn By-products (in parts per million)	Levels in Finished Feeds (in parts per million)
Equids and rabbits	For corn and corn by-products not to exceed 20% of diet **	5 ppm	1 ppm
Swine and catfish	For corn and corn by-products not to exceed 50% of diet **	20 ppm	10 ppm
Breeding ruminants, breeding poultry and breeding mink*	For corn and corn by-products not to exceed 50% of diet **	30 ppm	15 ppm
Ruminants < 3 months old being raised for slaughter and mink being raised for pelt production	For corn and corn by-products not to exceed 50% of diet **	60 ppm	30 ppm
Poultry being raised for slaughter	For corn and corn by-products not to exceed 50% of diet **	100 ppm	50 ppm
All other species or classes of livestock and pet animals	For corn and corn by-products not to exceed 50% of diet **	10 ppm	5 ppm

*Includes lactating dairy cattle and hens laying eggs for human consumption

**Dry weight basis

2024 Corn Survey

The Missouri Department of Agriculture Feed and Seed Program is happy to report the results on the annual monitoring of aflatoxin and fumonisin in corn as well as the crude protein level for the 2024 corn harvest. Corn samples were drawn from eighty-nine of the largest corn producing counties in Missouri. This survey has been reported yearly since 1993.

In 2024, the average crude protein for corn was 7.02% which dropped from 7.74% in 2023's corn crop. Each sample was adjusted to a 13.5% moisture level. The crude protein ranged from 6.75% for corn harvested in Northeast Missouri to 8.0% for corn harvested in Southwest Missouri.

One hundred twenty-three (123) samples were tested for aflatoxin and fumonisin in 2024. Only three (3) samples contained aflatoxin greater than 20 ppb. The aflatoxin results ranged from 32 ppb to 189 ppb. For fumonisin, nine (9) samples tested above 5 ppm. Fumonisin results ranged from 5.2 ppm to 16.8 ppm. In 2023, there were four (4) samples that contained aflatoxin greater than 20 ppb which ranged from 30 ppb to 100 ppb and thirty-five (35) samples contained fumonisin greater than 5 ppm which ranged from 5.4 ppm to 30 ppm.

Excellence in Compliance Award

The Excellence in Compliance Award is designed to recognize those companies who have high standards and have met or exceeded a 90% rounded average compliance in 2024. Those companies are listed below.

The Missouri Department of Agriculture will issue a certificate to honor those companies that have met or exceeded the following criteria:

- At least five random official regulatory samples must have been taken by a Missouri Feed and Seed inspector and been analyzed by the State Feed Control Laboratory in 2024.
- A 90% passing compliance rate on five or more samples must have been achieved for the 2024 calendar year.
- The company labeling the feed or feed ingredient must be in good standing with the Feed and Seed Program, retain a Missouri Commercial Feed License, and have all quarterly inspection fees or yearly product listing (pet and specialty pet foods) paid as required.

A total of 76 feed companies have achieved a 90% or better compliance rate in Missouri in 2024.

34 of these companies maintain an address in the state of Missouri and 42 are located outside of Missouri. A number of companies with out-of-state addresses have manufacturing facilities in Missouri.

SECTION ONE

Section One is intended to show the reliability of labelers in meeting their claims for feed quality. Inspections were planned on a random basis. The greater the number of samples taken per labeler, the greater the probability that the consistency in meeting claims shown will represent how well the labeler met guarantees.
